

Q1

*// Write a program to scan string from user then scan a single character
// and search it in a accepted string.*

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main(){
```

```
    char str[100], ch;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    printf("Enter a character to search: ");
```

```
    scanf(" %c", &ch);
```

```
    char *pos = strchr(str, ch);
```

```
    if (pos) {
```

```
        printf("Character '%c' found at position %ld\n", ch, pos-str + 1);
```

```
    } else {
```

```
        printf("Character '%c' not found in the string.\n", ch);
```

```
    }
```

```
    return 0;
```

```
}
```

Q2

// WAP Replace all Occurrences of 'a' with \$ in a String

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main(){
```

```
    char str[100], ch,replace;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    printf("Enter a character to search: ");
```

```
    scanf(" %c", &ch);
```

```
    printf("Enter a replacemet character: ");
```

```
    scanf(" %c", &replace);
```

```
    char *pos = strchr(str, ch);
```

```
    if (pos) {
```

```
        *pos=replace;
```

```
        printf("Updated string: %s\n", str);
```

```
    } else {
```

```
        printf("Character '%c' not found in the string.\n", ch);
```

```
    }
```

```
    return 0;
```

```
}
```

Q3

// WAP to Remove the nth Index Character from a Non-Empty String

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main() {
```

```
    char str[100];
```

```
    int n, len;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    printf("Enter the index to remove: ");
```

```
    scanf("%d", &n);
```

```
    len = strlen(str);
```

```
    if (n < 0 || n >= len) {
```

```
        printf("Invalid index!\n");
```

```
    } else {
```

```
        memmove(&str[n], &str[n + 1], len - n);
```

```
        printf("Updated string: %s\n", str);
```

```
    }
```

```
    return 0;
```

```
}
```

Q4

*// WAP to Form a New String where the First Character and the Last Character have
// been Exchanged*

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main(){
```

```
    char str[100];
```

```
    int n;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    n=strlen(str)-1;
```

```
    if(n>1){
```

```
        char temp=str[0];
```

```
        str[0]=str[n];
```

```
        str[n]=temp;
```

```
    }
```

```
    printf("Updated string %s",str);
```

```
    return 0;
```

```
}
```

Q5

// WAP to Count the Number of Vowels in a String

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main(){
```

```
    char str[100];
```

```
    int count=0;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    for(int i=0;str[i]!='\0';i++){
```

```
        char ch = tolower(str[i]);
```

```
        if(strchr("aeiou",ch))
```

```
            count++;
```

```
    }
```

```
    printf("Number of Vowels in a String : %d",count);
```

```
}
```

Q6

// WAP to Take in a String and Replace Every Blank Space with special symbol.

```
#include<stdio.h>
```

```
#include<string.h>
```

```
int main(){
```

```
    char str[100],symbol;
```

```
    printf("Enter a string: ");
```

```
    scanf("%[^\\n]", str);
```

```
    printf("Enter symbol u want add: ");
```

```
    scanf(" %c", &symbol);
```

```
    for(int i=0;i<strlen(str);i++){
```

```
        if(str[i]==' '){
```

```
            str[i]=symbol;
```

```
        }
```

```
    }
```

```
    printf("Sentense after adding symbol %s",str);
```

```
}
```

Q7

// WAP to Remove the Characters of Odd Index Values in a String

```
#include <stdio.h>
#include <string.h>

int main() {
    char str[100], result[100];
    int j = 0;

    printf("Enter a string: ");
    scanf("%s", str);

    for (int i = 0; str[i] != '\0'; i++) {
        if (i % 2 == 0) {
            result[j++] = str[i];
        }
    }
    result[j] = '\0';

    printf("Updated string: %s\n", result);
    return 0;
}
```

Q8

// WAP to Calculate the Number of Words Present in a String

```
#include <stdio.h>
```

```
int main() {
```

```
    char str[200];
```

```
    int count = 1;
```

```
    printf("Enter a string: ");
```

```
    scanf("%[^\n]", str);
```

```
    for (int i = 0; str[i] != '\0'; i++) {
```

```
        if (str[i] == ' ' && str[i + 1] != ' ' && str[i + 1] != '\0') {
```

```
            count++;
```

```
        }
```

```
    }
```

```
    printf("Number of words: %d\n", count);
```

```
    return 0;
```

```
}
```

Q9

*// WAP to Take in Two Strings and Display the Larger String without Using Built-in
// Functions*

```
#include <stdio.h>
```

```
int string_length(char str[]) {  
    int len = 0;  
    while (str[len] != '\0') {  
        len++;  
    }  
    return len;  
}
```

```
int main() {  
    char str1[100], str2[100];  
  
    printf("Enter first string: ");  
    scanf("%s", str1);  
  
    printf("Enter second string: ");  
    scanf("%s", str2);  
  
    if (string_length(str1) > string_length(str2)) {  
        printf("Larger string: %s\n", str1);  
    } else {  
        printf("Larger string: %s\n", str2);  
    }  
  
    return 0;  
}
```

Q10

// Write a program to check the string is palindrome or not.

```
#include <stdio.h>
```

```
#include <string.h>
```

```
int main() {
```

```
    char str[100], rev[100];
```

```
    int len, i, j;
```

```
    printf("Enter a string: ");
```

```
    scanf("%s", str);
```

```
    len = strlen(str);
```

```
    for (i = len - 1, j = 0; i >= 0; i--, j++) {
```

```
        rev[j] = str[i];
```

```
    }
```

```
    rev[j] = '\0';
```

```
    if (strcmp(str, rev) == 0) {
```

```
        printf("The string is a palindrome.\n");
```

```
    } else {
```

```
        printf("The string is not a palindrome.\n");
```

```
    }
```

```
    return 0;
```

```
}
```
